IVS 301 on Business Valuation deals with valuation of a business or business ownership interest (i.e., it includes valuation of business and equity shares).
> In connection with this exercise, we have adopted the following procedures to carry out the valuation analysis:

## VALUATION APPROACHES AND METHODOLOGIES

> For the purpose of valuation, it is necessary to select an appropriate basis of valuation amongst the various valuation techniques. It is universally recognized that valuation is not an exact science and that estimating values necessarily involves selecting a method or approach that is suitable for the purpose. The application of any particular method of valuation depends upon various factors including the size of company, nature of its business and purpose of valuation. Further, the concept of valuation is all about the price at which a transaction takes place i.e., the price at which seller is willing to sell and buyer is willing to buy. Accordingly, a fair and reasonable approach for valuing the shares of the company is to use a combination of relevant and applicable valuation methods.
> IVS 301read with IVS 103 specifies that generally the following three approaches for valuation of business I business ownership interest are used:

1. Cost Approach
2. Market Approach
3. Income Approach

## Cost Approach-Net Asset Value (NAV) method

> The value under cost approach is determined based on the underlying value of the assets which could be on book value basis, replacement cost basis or on the basis of realizable value. Under NAV method, total value of the business is based either on net asset value or realizable value or replacement cost basis. NAV methodology is most applicable for the business where the value lies in the underlying assets and not the ongoing operations of the business. NA V method does not capture the future earning capacity of the business. We have not considered NAV method for

the said valuation purpose as we understand that historical book value does not reflect intrinsic value of the investments made and held by the Company. We have computed the NAV per share for information purposes only.

## Income Approach - Discounted Cash Flows (DCF)method

> The income approach used for the valuation of equity shares of includes combination of Discounted Cash Flow ('DCF') method as well as valuation of certain other assets held by the Company, as relevant and applicable.
> Under the Income Approach, business is valued by converting maintainable or future amount of cash flows to a single current amount either through discounting or capitalization. DCF Method seeks to arrive at the value of the business based on its future cash flows generating capability and the risks associated with the said cash flows. FCFF or free cash flows to the firm ("FCFF") represents the cash available for distribution to both the owners and the creditors of the business. Risk-adjusted discount rate or Weighted Average Cost of Capital ("WACC") is applied to free cash flows in the explicit period and that in perpetuity.
> For DCF based valuation of certain assets, Management has provided us with the forecasted free cash flows of the properties I assets. We have relied on the projections provided to us for undertaking the valuation exercise.
> Management has provided us with fair values, inputs and assumptions of certain assets, which we have considered to arrive at the value of shares under the DCF approach.

## Market Approach - Market Price Method

> Under the Market Price method, the market price of an equity share as quoted on a recognized Stock Exchange is normally considered as the value of the equity shares of that company, where such quotations are arising from the shares being regularly and frequently traded. Generally, market value is reflective of the investors' perception about the actual worth of the company. However, in certain situations, the value of the share as quoted on the stock market would not be regarded as a proper index of the fair value of the share especially where the market values are fluctuating in a volatile capital market.
$>$ Regulation 164(5) of Chapter IV of SEBI ICDR Regulations reads as under-

For the purpose of this Chapter, "Frequently traded shares" means shares of the issuer, in which the traded turnover on any recognized stock exchange during the 240 trading days preceding the relevant date, is at least ten per cent of the total number of shares of such class of the shares of the issuer.
Explanation: For the purpose of this regulation, 'stock exchange' means any of the recognized stock exchange( $s$ ) in which the equity shares of the issuer are listed and in which the highest trading volume in respect of the equity shares of the issuer has been recorded during the preceding 90 trading days prior to the relevant date."
The equity shares of the Company are traded on the NSE and the BSE. However, as per Explanation to regulation 164(5) of the SEBI ICDR Regulations, the exchange on which higher trading volume of equity shares during the preceding 90 trading days prior to the relevant date, is recorded, is to be considered for the pricing computation.

- Since, is a listed company and equity shares of are traded on NSE and BSE over a reasonable period, we have considered Market Price method to determine the value of equity shares of M/s LOKESH MACHINES LTD. We understand that the shares are frequently traded as per SEBI ICDR Regulations.
- Relevant date in case of preferential issue of equity shares is defined in regulation 161 of
SEBI ICDR Regulations as "the date thirty days prior to the date on which the meeting of shareholders is held to consider the proposed preferential issue". However, it was explained in the aforesaid regulations that where the relevant date falls on a weekend or a holiday, the day preceding the weekend or the holiday will be reckoned to be the relevant date.
- We have been informed by the management of M/s LOKESH MACHINES LTD that the relevant date to be considered for the said Transaction should be 03rd November 2023. We have considered equity share prices up to i.e., trading day preceding to the relevant date for undertaking the valuation analysis.
- We have considered the stock prices of M/s LOKESH MACHINES LTD from NSE for calculating the fair market value of equity shares of considering the volumes traded on NSE is higher than that in BSE.
- Details of trading volume on the BSE for 90 trading days prior to the relevant date is summarized as under:
